Noisy observations and biomarker averaging
A
True population
Biomarker 1
Biomarker 2
Biomarker 3
3-marker average
$\log_{10}(N+1)$
Drug-1 treatment cycle
Noise reduces timing accuracy
B
$t_{\min}$ MAE (cycles)
1 biomarker
2 biomarkers
3 biomarkers
Noise SD on $\log_{10}(N+1)$
Multiple biomarkers partially restore benefit
C
ABC, 1 biomarker
ABC, 2 biomarkers
ABC, 3 biomarkers
Reactive, 1.25× rebound
Oracle
Mean extinction probability
Noise SD on $\log_{10}(N+1)$
