A
Detection-limited recurrence delays switching
True trajectory
10× NED threshold
Reactive scans
1.25× threshold
t_{min}
$\log_{10}(N+1)$
Drug-1 treatment cycle
B
Prospective prediction versus reactive detection
Mean extinction probability
0.636
0.000
0.704
0.698
0.770
Reactive 1.25×
NED 10×*
ABC
True nadir
Oracle
* 10× cases without detectable recurrence by cycle 12 are counted as no second strike.
C
10× recurrence is rarely detected by cycle 12
Fraction triggering reactive switch
1.25× rebound
10× NED rebound
Noise SD on $\log_{10}(N+1)$
D
NED recurrence is detected later
Mean switch time $-t_{min}$ (cycles)
1.25× rebound
10× NED rebound
Noise SD on $\log_{10}(N+1)$
