
a
Drug-1 responses vary among patients
Median trajectory
Last of 4 early scans
$\log_{10}(N+1)$
Drug-1 treatment cycle
b
High-extinction timing spans the nadir
Mean extinction probability
Second-strike lag relative to true t_{min}
c
Treatment-timing landscapes are patient specific
Patients sorted by true t_{min}
Second-strike lag
True t_{min} lag
Earliest max-extinction lag
No extinction at any tested lag
Extinction probability by cycle 300
